## 2 PLUS 2

- *Time Released*
- *Granular Herbicide*
- *2.0% Bromacil*
- *2.0% Diuron*
- *Soil Sterilant*
- *Nonselective*

### DESCRIPTION

Two powerful herbicides, Diuron and Bromacil, are combined to form a double action "time released" granular soil sterilant. The Diuron goes to work rapidly to destroy the plant from the roots up. This is the initial killing phase. The Bromacil is remarkably slow dissolving, making it possible to extend the herbicide's optimum effect throughout the entire season. This secondary phase provides a long lasting barrier to prevent growth. The active ingredients are manufactured with wetting agents and penetrants and encapsulated in a natural granular carrier. This eliminates spray drift and reduces leaching often encountered with other herbicides. Excellent product to use when weeds are tall, in sandy soils, or in high rainfall areas. This product should be applied as furnished with a speed spreader, a fertilizer spreader, a shaker type applicator or with any equipment which will distribute the chemical uniformly over the area to be treated. Product is safer to apply because there is no mist to breath. Coverage: 1/2 to 1 pound per 100 square feet. Ready to use.

### MARKETS

To be used on ramps, fence rows, railroad sidings, in storage yards, parking lots, around buildings, industrial plant sites, lumber yards, utility & pipelinks, schools, highway authorities, vacant lots.

### DIRECTIONS

This granular weed killer is a non-selective herbicide for controlling a wide range of annual and perennial weeds and grasses. It is recommended only for non-cropland areas such as railroads rights-of-way and industrial areas. 200-400 pound applications of this product per acre usually results in a non-productive condition of the soil for a period of a year or more. The duration of non-productivity is dependent upon rainfall, soil type and other conditions.
