

PRODUCT BULLETIN

R-578 REPCO KILL III

- Solvent Based
- 1.09% 2,4-D
- 0.98% Bromacil
- Contact Kill, Top Kill, Root Kill
- Nonselective Soil Sterilant

DESCRIPTION

This product is designed for use in areas where all vegetation is to be killed. By using this herbicide, all the vegetation will be killed (non-selective), and control will last for one growing season (residual), avoiding costly hand weed cuttings and/or several weed killing applications. This high performance herbicide is a triple kill formula - contact kill, top kill, and root kill. The phytotoxic oil carrier combines the properties of low volatility with rapid penetration, absorption, and translocation of the active ingredients to produce rapid browning and contact kill. The 2,4-D provides systemic kill forcing the plant to outgrow itself. The Bromacil, once washed into the ground, will kill the roots and prevent any new weed growth. The insolubility of Bromacil in water maximizes effectiveness regardless of rainfall after application or stage of growth at time of application. This product may be applied at any time of the year when weeds are growing. Plant growth will be controlled for up to one growing season, depending upon application volume and soil consistency. Care should be taken to avoid over spraying, or allowing spray drift to contact desirable vegetation. Coverage: 1-2 gallons for each 1000 square feet. Ready-to-use.

MARKETS

To be used on ramps, fences rows, railroad sidings, in storage yards, parking lots, around buildings, industrial plant sites, lumber yards, utility & pipelines, schools, highways, vacant lots. Especially formulated for industrial and municipal weed control.
