

PRODUCT BULLETIN

R-583 WEED-A-CIDE

- Solvent Based
- Double Action - Contact and Soil Sterilant
- Water Emulsifiable
- Concentrated
- Nonselective

DESCRIPTION

A nonselective concentrated herbicide that can be applied for post-emergent or pre-emergent weed control. For large treatment areas this product is dilutable at the rate of one part product to ten parts oil or water. This product is water emulsifiable and noncorrosive to equipment. When diluted with oil, this product is formulated to be a desiccant when applied to live vegetation. This ability to dehydrate the plant causes a quick top kill within 24 hours. In addition to an effective top kill, the treatment will be absorbed through the roots to give complete root kill. The effect will last up to a full season. This allows for the product to be used for spot treatment as well as for large area coverage. One gallon of concentrate covers 650 to 1,000 square feet. Dilutes 1:10 with water or oil.

MARKETS

To be used on ramps, fence rows, railroad sidings, in storage yards, parking lots, around buildings, industrial plant sites, lumber yards, utility & pipelines, schools, highway authorities, vacant lots.

DIRECTIONS

DILUTION FOR WEED and GRASS CONTROL: SPOT TREATMENT: For control of annual and susceptible perennial weeds (such as downy brome grass, oatgrass, goosegrass, puncture-vine, goldenrod and plantain), thoroughly mix 2-3 pints of this product in 3 gallons of water and spray up to 250 square feet to give thorough and uniform coverage.

LARGE TREATMENT AREA: Application rates for large areas depend on climatic conditions, soil type, weeds present and stage of growth of the weeds. Mix one gallon product with 10 gallons water to cover 650 to 1000 square feet. The recommended dosages are equivalent to 43-65 gallons of product per acre.
